Float Tech's

Hunting Gear with Inflatable Capabilities

TROY, NY February 29, 2008 – Float-Tech Inc., has advanced the technology of personal flotation devices for boating safety, focusing on the outdoor recreation market.

The US Coast Guard approved and patented Float-Tech® jacket was designed to overcome the weight and bulkiness of traditional life jackets. Float Tech Inc. has a licensing agreement with Smith & Wesson to incorporate this technology into Sportsman Hunting jackets. The jacket's proprietary zip-in inflatable liner can be worn alone as a vest, or zipped into lightweight, waterproof, all-season, and breathable performance outerwear. In addition, the Advantage Max-4 HD Camouflage print jacket shell also includes sleeves that zip off, a hidden brimmed hood, double rain flap main body zipper, cargo pockets with shell carriers, and three accessory d-rings.

Over three million people hunt waterfowl on or near the water. For outdoor recreation and other water enthusiasts the Float-Tech® camouflage jacket is the solution allowing the user unrestrictive movement while ensuring safety. The zip-in liner of the Float-Tech® jacket will activate automatically within three to five seconds upon immersion in water or can be manually inflated before entry. The product is the first inflatable life jacket to be integrated inside outerwear and pass the Coast Guard's turn-over test, this means an unconscious victim.

The USCG approved Float-Tech® life jacket is available at a variety of locations. For a list of retailers and more information, visit the company website at www.floattech.com.
